## **CMBI Mining Series**

The CMBI Mining Series provide the cryptoasset community, investors and asset managers with publicly available and investable benchmarks that reliably and accurately track the activity of one of crypto's critical functions, mining.

The CMBI Bitcoin Hash Rate (CMBIHASH) represents the implied hash rate that miners are contributing to Bitcoin at any single point in time. The CMBI Bitcoin Hash Rate utilize a 48hr lookback window to accurately reflect the current performance of miners whilst maintaining resistance to outlier results and potentially manipulative activities.

The CMBI Bitcoin Observed Work (CMBIWORK) utilizes the real-time levels from the CMBI Bitcoin Hash Rate to represent an approximation for the number of hashes that have been conducted over the previous 24hr period.

### Historical Performance\*

<sup>\*</sup>Performance of indexes prior to their respective launch date is back-tested performance utilizing historical data

### **Features**

### Coverage

CMBI Mining Series currently provides coverage for Bitcoin only.

### **Objective**

Mining indexes are designed to accurately represent mining activity and act as the basis for financial products including derivatives such as futures and swaps.

### **Transparent**

Index design and calculation follow a rules-based process that is publicly available on the Coin Metrics website.

### Investability

Assets launched in the CMBI Mining Series have selected based on the size and activity of mining conducted on their network.

### **Price**

CMBI Hash Rate is measured in Petahashes/second. CMBI Observed Work is measured in Zettahashes/day.

### **Availability**

Mining indexes are calculated every 5 seconds. The close price for the CMBI Mining Series is the 5 second level from 12:00ET.
